

Personal Summary

Software Engineer with experience building scalable backend, web, and enterprise applications using PHP, Python, Java, React, Mobile Languages. Experienced in designing REST APIs, real-time communication systems, and high-concurrency platforms supporting over 100,000 users. Skilled in software architecture, system integration, Agile development, and collaborating with international teams to deliver reliable and maintainable solutions.

Skills

- Core Technologies
Python, Java, React, JavaScript, Mobile Development
- Backend & Architecture
REST API Design, Backend Development, Scalable Systems, Clean Architecture, MVC, MVVM, WebSockets
- Tools & DevOps
Git, Docker, CI/CD (Continuous Deployment)
- Engineering Practices
Code Refactoring, Software Testing, Software Development Lifecycle (SDLC)
- Methodologies
Agile (Scrum), Trello, Asana

Experience

Full-Stack Developer

November 2025 to Current

OPPO - Ciudad de México, México

- Developed and maintained backend services and business applications for enterprise systems.
- Built and optimized REST APIs, improving performance and system reliability.
- Collaborated with international teams following Agile methodologies and software engineering best practices.
- Performed code reviews, refactoring, and technical analysis to improve maintainability and reduce technical debt.
- Integrated AI-powered development agents into the software delivery process, accelerating code reviews, technical planning, test generation, and development workflows.
- Leveraged AI-assisted tools to improve engineering productivity, solution design, and software quality throughout the SDLC.

Full-Stack Developer

March 2025 to November 2025

Posibilidades - On remote

- Developed backend integrations between firmware applications and server-side systems.
- Implemented Python-based WebSocket communication services to connect embedded software with PHP backend infrastructure in real time.
- Designed and developed a digital wallet platform using React for the frontend and Laravel for backend services, implementing secure transaction and account management features.
- Reduced technical debt in a long-running application, improving maintainability and scalability.
- Modernized legacy systems and integrations, increasing system stability and reliability.
- Served as Technical Lead for a team of four developers, coordinating requirements, task planning, technical decisions, code reviews, and delivery throughout the software development lifecycle.

Software Engineer

January 2023 to March 2025

Freelance / Projects - On remote

- Developed web, backend, desktop, and mobile applications across multiple projects and organizations.
- Designed and implemented business applications, scalable APIs, and internal management systems using modern software engineering practices.
- Developed Java desktop applications with graphical user interfaces (GUI), including inventory management and business process automation solutions.
- Implemented database integrations in Java with MySQL and Microsoft SQL Server, designing data access layers and optimizing data management workflows.
- Built user interfaces and internal tools while collaborating with multidisciplinary teams in Agile environments.
- Developed desktop GUI applications and automation tools using Python.
- Designed and implemented a compiler in Python, including lexical analysis, syntax analysis, semantic validation, and symbol table management.
- Applied Clean Architecture, MVC/MVVM patterns, testing, and software development best practices to improve maintainability, scalability, and performance.

Education

Ing. : Sistemas Computacionales, December 2024

Universidad Autónoma De Aguascalientes
